

# Differences Between the ASPS SAS and m-SAS Systems

Power Supply Specifics	ASPS SAS	ETSM m-SAS
<b>Power Supply Output Power and Size</b>	<ul style="list-style-type: none"> <li>1CH - 1200W</li> <li>2CH - 600W/channel</li> <li>1U</li> </ul>	1CH - 840W
<b>Max Voc</b>	40-220V in 5V increments	60V, 80V, 150V
<b>Max Isc</b>	<ul style="list-style-type: none"> <li>15A for 600W channel</li> <li>20A for 1200W channel</li> </ul>	14A, 10.5A, 5.6A
<b>Voltage Programming Accuracy</b>	$\pm 0.05\% + 0.05\% V_{ocmax}$	$\pm 0.2\%$ of full scale voltage
<b>Voltage Readback Accuracy</b>	$\pm 0.05\% + 0.05\% V_{ocmax}$	$\pm 0.2\%$ of full scale voltage
<b>Current Programming Accuracy</b>	$\pm 0.08\% + 0.08\% I_{scmax}$	$\pm 0.5\%$ of full scale current
<b>Current Readback Accuracy</b>	$\pm 0.1\% + 0.1\% I_{scmax}$	$\pm 0.5\%$ of full scale current
<b>OVP Accuracy</b>	$\pm 0.25\% V_{ocmax}$	0.2% of full scale voltage
<b>Output Capacitance</b>	$\leq 70nF$	$\leq 10nF$
<b>Output Voltage Noise Peak to Peak</b>	$\leq 0.2\%$ of $V_{ocmax}$	<ul style="list-style-type: none"> <li>60V, 80V: <math>\leq 0.35V</math></li> <li>150V: <math>\leq 0.60V</math></li> </ul>
<b>Output Current Noise Peak to Peak</b>	$\leq 0.4\%$ of $I_{scmax}$	$\leq 60mA$
<b>Protections</b>	<ul style="list-style-type: none"> <li>Programmable Primary OVP</li> <li>Programmable Secondary OVP</li> <li>Programmable Primary OCP</li> <li>Programmable Secondary OCP</li> <li>Output Electronic Circuit Breaker (ECB)</li> <li>10<math>\mu s</math> external interlock shutdown</li> <li>Overtemp</li> </ul>	<ul style="list-style-type: none"> <li>Programmable OVP</li> <li>Fixed OCP 150% of <math>I_{scmax}</math></li> <li>Interlock shuts down unit through the microcontroller and is not intended for safety critical applications</li> </ul>
<b>Output Isolation Relays</b>	Standard	Not available
<b>Shunt Switching Performance</b>	$\leq 2\mu s$ current recovery	Not capable
<b>Series Switching Performance</b>	$\leq 100\mu s$ current response	Not capable
<b>Peak Power Tracking</b>	200Hz tracking speed	250Hz tracking speed
<b>IV Curve Formula</b>	$V = \frac{\left( \frac{V_{oc} \ln \left( 2 - \left( \frac{I}{I_{sc}} \right)^n \right)}{\ln(2)} \right) - R_s(I - I_{sc})}{1 + \left( \frac{R_s I_{sc}}{V_{oc}} \right)}$	$I = I_{sc} * \left( 1 - C1 * \left( \exp \left( \frac{V}{C2 * V_{oc}} \right) \right) - 1 \right)$ $C1 = \left( 1 - \left( \frac{I_{mp}}{I_{sc}} \right) \right) * \left( \exp \left( - \frac{V_{mp}}{C2 * V_{oc}} \right) \right)$ $C2 = \left( \left( \frac{V_{mp}}{V_{oc}} \right) - 1 \right) * \left( \ln \left( 1 - \frac{I_{mp}}{I_{sc}} \right) \right)^{-1}$
<b>Typical IV Curve Shape</b>		
<b>IV Knee Shape</b>		
System Specifics	ASPS SAS	ETSM m-SAS
<b>Cabinet</b>	Heavy duty, 24" wide bays	Medium duty, 22" wide bays
<b>AC Input and Control</b>	<p>Full AC Control chassis with AC contactor controlled by system On/Off panel. IEC pin and sleeve AC input connector, Mains circuit breaker.</p> <p>On/Off panel includes 3 phase voltage measurements, System On button, System EMO Off button, Fault tolerant shutdown system indicators</p>	<p>AC control and distribution consisting of Mains AC breaker with trip coil and distribution block. AC input wiring terminal block.</p> <p>On/Off panel with system On and Off buttons</p>
<b>DC Output</b>	Custom Interface Test Adapter with MS style connector	6 pin Positronic connectors on I/O panel
<b>Shutdown Interlock</b>	<ul style="list-style-type: none"> <li>Fault tolerant shutdown board</li> <li>MS style shutdown connector</li> </ul>	D-sub 9 shutdown connector
<b>Computer and Communication to Power Supplies</b>	<p>2U server style computer with AMETEK SAS software</p> <p>Ethernet communication through industrial Ethernet switch to power supplies</p>	<p>2U server style computer with AMETEK m-SAS software</p> <p>Ethernet communication through industrial Ethernet switch to power supplies</p>
