Signal Quality Analyzer-R MP1900A

Due to the explosive growth of data traffic resulting from the popularity of smartphones and mobile terminals, network interfaces are transitioning to faster 200/400 GbE standards, and PCI bus interface speeds now exceed 10G. In addition, the equipment and chipsets using these interfaces support multi-channels and multi-protocols. The MP1900A series is a high-performance BERT with excellent expandability for supporting Physical layer evaluations of these high-speed interfaces. The all-in-one design is ideal for early stage R&D evaluations of all interfaces covering next-generation Ethernet networks to bus interconnects

*14: Differential, Mark Ratio 1/2, when connecting J1758A and MU196020A by using J1789A, 34VKF50 and J1728A.

At a constant temperature between 20°C and 30°C, measure with a 70-GHz bandwidth sampling oscilloscope with residual jitter of less than 200 fs rms. Adjust MU196020A De-Emphasis (2 Pre Cursors and 1 Post Cursor) so that the product of Eye Height (1E-06) and Eye Width (1E-06) can be maximized in the differential waveform.

Calculate the 4th Bessel Filter (Cutoff Frequency 50 GHz) + CTLE (+1 dB Peaking at 14 GHz) and calibrate it to a PAM4 waveform with Eye Amplitude of 0.88 Vp-p (Diff) or less and Eye Linearity RLM 0.85 or more.
