**Commissioning and Verifying Mobile Backhaul**

The MU100090B is an atomic-clock oscillator module providing reference timing to test network synchronization. It supports GPS, GLONASS, Galileo, Beidou, and QZSS as a reference timing source.

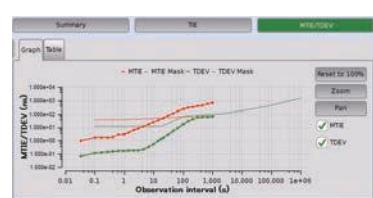

- Evaluation of PTP/SyncE synchronized network
  - At the network edge, the MU100090B emulates a slave clock to monitor timing distributed to the network.- max|TE| (absolute Time Error), cTE (Constant Time Error), dTE (Dynamic Time Error), wander (MTIE, TDEV) and pktSelectedTE as metrics of phase/time synchronization.
  - One-way delay (OWD) is measured to evaluate PDV and FPP.
  - SyncE Wander by TIE, MTIE, TDEV metrics
- Protocol Functional Test
  - After a PTP session is established, the tester displays various status conditions announced from the network and measures message rates.
  - Supported Profiles: G.8265.1, G.8275.1, G.8275.2, SMPTE2059-2 and customized parameters.
- One-way delay measurement using two MT1000A units
  - Synchronizes multiple MT1000A units in combination with MU100010A1 or MU100011A for one-way high-accuracy latency measurements between separate localities

## Remotely Controlled Network Installation, Start-up, and Maintenance

The MT1000A has a useful remote function for network installation, start-up and maintenance. Connecting the office and job site via LAN allows engineers in the office to see screens at the on-site instrument while making settings and measurements, and troubleshooting. This provides an efficient link between engineers and on-site measurements to help cut network installation and maintenance costs.

## Easy Connections Anywhere Using SORA (Site Over Remote Access)\*

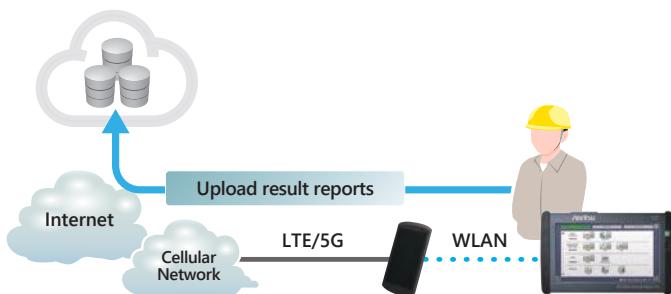

Using the MX109020A Site Over Remote Access (SORA hereafter) software measuring instruments can be remotely controlled easily anywhere. The SORA cloud-based service allows office users to log-in to an Internet webpage to control the measuring instrument from the office via a smartphone.

## Uploads Measurement Reports to Cloud Storage

Can upload measurement-result reports to cloud storage via SORA

Linking with the SEEK tool for automatic scenario creation facilitates automation of related processes such as settings, measurement start, pass/fail evaluation, measurement results reporting, etc. The connection between the tester and storage uses secure SSH or HTTPS.

\* This service can be used in countries and regions where the MT1000A WLAN/Bluetooth option has been approved. For details, contact Anritsu.

\* To connect using SORA, you must purchase an option license for the main unit as well as a subscription license.

Refer to the MX109020A leaflet and product introduction for more details. You must agree to the service contract before purchasing SORA.

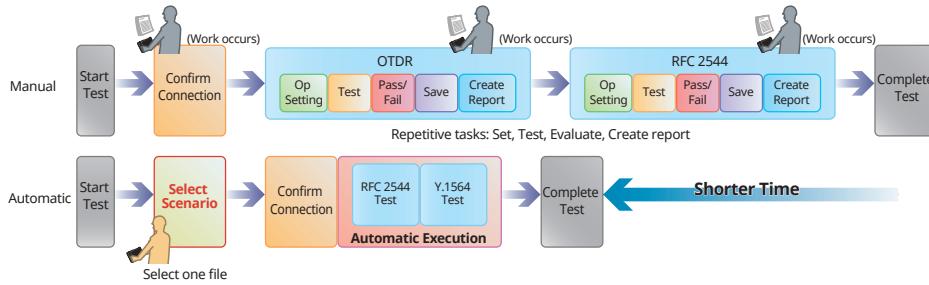

Refer to the service contract at the following URL: <https://www.anritsu.com/en-AU/test-measurement/support/downloads/manuals/dwl20059>.

## Automated Field Test Environment

The MT1000A has automatic test functions for simple and efficient network commissioning. These MT1000A automated test functions run scenario files created in advance on a PC to perform tests automatically using preset measurement items, procedures, and pass/fail evaluation conditions. Since the scenario also handles report creation, evaluation and results, inexperienced workers can run accurate tests without operation mistakes and re-tests.

## Video Inspection Probe

Scratches, chips and contamination on optical fiber connector end faces reduce transmission quality and increase errors. This leads to additional I&M work and cost. When the external optical fiberscope (G0382A USB Autofocus type, G0306C USB Standard type: sold separately) is connected, scratches and dirt on the optical connector end face can be confirmed visually. The connector image and detailed PASS/FAIL status is displayed as defined by IEC 61300-3-35 ensuring quality and consistency from connector to connector, technician to technician.
